	Garden designing application creator is looking for garden elements retailers to be implemented into the application	A Polish start-up company from South-West of Poland is looking for retailers of garden elements (plants, benches and other things) who would be interested in offering their products within the garden designing application. The application is designed to support people (professionals and non-professionals) who would like to design and visualize (in 3 Dimensions) gardens with the use of a computer.	6/24/2014	Polish Start-up Company from South-West of Poland is looking for "garden equipment" retailers who would be interested in promotion of their products via online garden designing application. The application is designed to be used by non-professionals to plan their gardens or by professionals like landscape designers to design large green-recreation areas. The offering company is a start-up created by graduates from University of Life Sciences as well as Technical University who designed the application to grow along with its user community delivering opportunity to increase its functionality by adding real-life, plants and facilities, available at various shops and garden centres. Requested retailers of garden elements by cooperating with this Start-up will possess the chance to offer their product in most advanced way.	The application is ready to use, does not require installation as it's an online solution. It's also localized for German and English language. Also, the application does not requires special skills or knowledge, provides the opportunity to implement photo-like elements (plants and other garden products) into garden designs. The application is built to grow along with its user community and amount of cooperating retailers (products to choose from while designing the garden).	Retailors interested in offering their products via online garden designing app are being sought.

	Device for absorbing kinetic energy / safety belt systems	Polish SME has developed device absorbing kinetic-energy for safety belts. The solution absorbs kinetic energy of a moving body during the collision. Offered device is submitted for IPR protection. This solution can also be used with child-protection safety systems. The device is less harmful than currently used tensioner based safety systems. The inventor company is now looking for industrial R&D partners interested in further development, testing and technology application.	5/13/2013	<p>This technology concerns a new way, of harmful, kinetic energy absorption. All safety belt systems are designed to keep the passenger seated in place during the collision, especially when its body is a subject to a sudden acceleration and significant amount of potentially harmful g-force. Polish SME has developed device absorbing this harmful energy during the collision with a rotational movement of its internal transmission, configured to lower the force of impact and increase the safety of the passenger. The device as well as its integration with vehicles existing safety belt systems and child-protection systems (i.e. ISOFIX) are IPR protected. Current stage of development describe the device as less harmful than currently used tensioner based safety systems. The inventor company is an experienced company active in the automotive sector.</p> <p>Technical Specifications / Specific technical requirements: The energy absorbing device comprises of a rotatable absorber capable to absorb sudden g-force with its internal transmission</p>
